

## Project Engineer

[Apply Now](#)

Company: Fluor Corporation

Location: Copenhagen

Category: architecture-and-engineering

The purpose of this position is to plan and perform work requiring sound technical judgment in the evaluation, organization, and execution of project management assignments worldwide. This role has the responsibility to perform the essential job duties and functions as listed below with the overall objective of managing and/or coordinating project activities that are in compliance with the contract and ensure the safety, quality, value, timeliness, and Fluor profitability of the completed project. Performing assigned general duties of limited scope and level of responsibility, this position is designed to develop broader project management knowledge and experience. At this level, the role may have the responsibility as the only project engineer on a small project with full accountability for the general duties, or the responsibility for general duties on a mid-sized project or more complex segment of a larger project.

- Perform basic project engineering functions involving monitoring of progress, preparation of procedures, documentation of communications and meetings, and identification/evaluation of project issues and problems
- Assist in management and coordination of activities among all project functions and engineering disciplines in accordance with the established project baseline
- Coordinate efforts of technical disciplines, vendors and licensors to ensure integrated and complete designs that meet project requirements and contractual requirements
- Support creation and coordination of overall project plans and schedules, and monitoring activities, progress, and milestones against the plans
- Support creation and coordination of project effort hours, and cost estimates and budgets,

and monitor progress and cost performance against these

- Support the preparation, delivery and coordination of project deliverables, design documents, and bid packages
- Support creation and coordination of overall project plans and schedules, and monitoring activities, progress, and milestones against the plans
- Support the preparation, delivery and coordination of project deliverables, design documents, and bid packages
- Other duties as assigned
