Senior Staff Software Engineer/Principal Software Engineer - Databases

Denmark

P-1127

Summary

We are hiring a Senior Staff Software Engineer/Principal Software Engineer for Databricks' Engineering team reporting to an Engineering will be part of the Databricks engineering organization, working on one the most important products here within Databricks while working with teams that develop Databricks products and features for thousands of enterprises worldwide as well. As a software engineer, you will join as a founding member of our Berlin site (fully remote) but really as a founding team for our multi-year journey to achieve our Lakehouse vision. You will be involved in the entire development cycle and

exemplify all core Databricks values (own-it, data decide, teamwork, customer-obsessed).

Key Characteristics

As an engineer at Databricks, you will build the next generation distributed data storage and processing systems that can outperform specialized SQL query engines in relational query performance, yet provide the expressiveness and programming abstractions to support diverse workloads ranging from ETL to data science.

Job Description

At Databricks, we are obsessed with enabling data teams to solve the world's toughest problems, from security threat detection to cancer drug development. We do this by building and running the world's best data and AI infrastructure platform, so our customers can focus on the high value challenges that are central to their own missions.

Our engineering teams build highly technical products that fulfill real, important needs in the world. We develop and operate one of the largest scale software platforms. The fleet consists of millions of virtual machines, generating terabytes of logs and processing exabytes of data per day. At our scale, we regularly observe cloud hardware, network, and operating system faults, and our software must gracefully shield our customers from any of the above.

The Impact you will have:

Solve real business needs at large scale by applying your software engineering.

Deliver a highly scalable, available, and fault-tolerant engine processing hundreds of TB of data daily across thousands of customers

Low level systems debugging, performance measurement & optimization on large production clusters.

Build architecture design, influence product roadmap, and take ownership and responsibility over new projects.

Introduce tools to allow greater automation and operability of services.

Use your deep experience to help prevent and investigate production issues.

Plan and lead complicated technical projects that work with several teams within the company.

Contribute as a Technical Team Lead by mentoring others, lead sprint planning, delegating work and assignments to team members and participate in project planning.

What we look for:

15+ years industry experience building and supporting large-scale distributed systems.

Comfortable working towards a multi-year vision with incremental deliverables.

Motivated by delivering customer value and impact.

Strong foundation in algorithms and data structures and their real-world use cases.

Experience driving company initiatives towards customer satisfaction.

BS/MS/PhD in Computer Science or related majors, or equivalent experience.

Benefits

Comprehensive health coverage including medical, dental, and vision

Equity awards

Flexible time off

Paid parental leave

Family Planning

Gym reimbursement

Annual personal development fund

Employee Assistance Program (EAP)

Mental wellness resources
